Data Points Collected

**< 2 days**

Average Integration Time

## The Problem

- Users matched when emotionally unavailable
- No objective way to measure recovery
- Burnout detected after it's too late

## The Solution

- Emotional Readiness Score (0-100)
- Timeline, outcome & risk predictions
- Simple REST API, real-time results

## Target Markets

- **Dating Apps** Filter and prioritize matches based on emotional readiness
- **Mental Health** Track patient recovery with objective, data-driven metrics
- **HR & Wellness** Identify at-risk employees and enable early intervention

### DESIGN PARTNER PROGRAM

We're selecting 5 partners for early access with preferred terms:
